The invention relates to an isolated nucleic acid encoding a PRO polypeptide. Nucleic acids that encode PRO can be used to generate either transgenic animals or knock-out animals useful in developing and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy for replacing defective gene, in chromosome identification, as chromosome markers, or in generating probes to isolate till length PRO cDNA. The PRO polypeptides are useful for chondrocyte stimulation, TNF-alpha stimulation, human dermal fibroblasts stimulation and for detecting the presence of tumour in an mammal. The PRO polypeptides are useful as molecular markers for protein electrophoresis and the isolated nucleic acids may be used for recombinantly expressing those markers. The PRO polypeptides and nucleic acids may also be used in fisue typing, Anti-PRO antibodies are useful in diagnostic assays for PRO antibodies are useful in diagnostic assays for PRO antibodies are useful in diagnostic assays for PRO antibodies are useful in diagnostic assays for protein electrophoresis of a human secreted/transmembrane PRO polypeptide

suffering from systemic inflammatory response syndrome (SIRS).

suffering from systemic inflammatory response syndrome (SIRS).

respiratory distress, acute lung injury, acute respiratory distress syndrome, multiple organ dysfunction syndrome, sepsis and chronic bondrius.

Parturcive pulmonary disease (e.g. emphysema and chronic bronchitis).

The SIRS includes pancreatitis, ischaemia, multiple trauma and tissue injury, haemorrhagic shock, immune-mediated organ injury, shock and renal failure. FSF12 regulates glucose levels in response to nutrient dispersion; affects the overall metabolic state and counter-acts negative side effects that occur during the body's stress response to sepsis; reduces morbidity and mortrality that occurs in critically ill patients; and stimulates glucose uptake and enhances insulin sensitivity. The present sequence represents the human FGF-21 amino acid sequence, which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for the reduction of mortality and morbidity in critically ill patients, which involves the administration of fibroblast growth factor 21 (FGF-21) (I). (I) has antiinflammatory, respiratory, antibacterial, immunosuppressive, vasotropic, haemostatic and nephrotropic activities, and can be used as a glucose level regulator, a glucose uptake stimulator, and an insulin sensitivity enhancer. (I) can be used in the manufacture of a medicament for the reduction of morbidity and mortality in critically ill patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of fibroblast growth factor 21 for reduction of mortality and morbidity in patients suffering from e.g. systemic inflammatory response syndrome and acute respiratory distress syndrome.
                                                                                                                                                                                                           mortality; morbidity; fibroblast growth factor 21; FGF-21; antiinflammatory; respiratory; antibacterial; immunosuppressive; vasotropic; haemostatic; nephrotropic; glucose level regulator; glucose uptake stimulator; insulin sensitivity enhancer; systemic inflammatory response syndrome; respiratory distress; acute lung injury; acute respiratory distress syndrome; multiple organ dysfunction syndrome; sepsis; chronic bronchitis; pancreatitis; ischaemia; multiple trauma; tissue injury; haemorrhagic shock; immune-mediated organ injury; shock; renal failure.
                                                                                                                                                                             Human fibroblast growth factor 21 SEQ ID NO:1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 15-16; 22pp; English.

This invention relates to one hundred and twenty two novel nucleic acids encoding human PRO membrane bound proteins or receptors. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gerritgen ME, Goddard A, Godowski PJ;

              inhibiting the proliferation of normal human dermal fibroblast cells. PRO polypeptides such as PRO6004, PRO4981, PRO7174, PRO5778, PRO4732, etc., are useful for detecting the presence of tumour in a mammal which involves comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of the profit of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung
                                                                                                                                                                   tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polymucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1212 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Wood WI;

for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO329, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them. The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TMF)-alpha from human blood, for stimulating the proliferation or differentiation of expression in pericyte cells or for stimulating the proliferation of or gene normal human dermal fibroblasts. The PRO nucleic acids are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New PRO polypeptides and nucleic acids encoding the polypeptides, useful e.g. in gene therapy, disease diagnosis, chromosome identification and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gerritsen ME, Goddard A, Godowski PJ;

technology, in generating transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.

```
The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypeptides encoding them.

Transmembrane polypeptides) and the PRO polynucleotides encoding them. CT fro PRO polypeptides and polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour, breast tumour, rectal tumour or liver tumour, breast tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TNP) alpha from human constitution the release of tumour necrosis factor (TNP) alpha from human constitution in perioryte cells, for stimulating the proliferation of or gene expression in perioryte cells or for stimulating the proliferation of or gene constant fibroblasts. The PRO nucleic acids are useful as nicknesses and probes, in chromosome and gene mapping, in generating transgenic animals or knock-out animals which reagents, in gene therapy, in chromosome and gene mapping, in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as periorye-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the recondition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as periorye-associated tumours and bone and/or cartilage consisting analyses of propressing an electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.
                                                                                                                                                                          One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                          Claim 11; Fig 78; 314pp; English.

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polynucleotides encoding them. The PRO polypeptides and polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation of crosmal time periotyte cells, for stimulating the proliferation of or gene cymral human dermal fibroblasts. The PRO nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, in generating certonlogy, in generating transgenic animals which may be used in the development and screening of therapeutically useful reagents, in generating transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents, in generating probes. The PRO polypeptides, or anti-PRO markers and in generating probes. The PRO polypeptides, or anti-PRO markers and in generating probes. The PRO polypeptides or anti-PRO markers and in generating a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the re-

New isolated polypeptides designated PRO polypeptides including polypeptides useful for stimulating the proliferation or differentiation of specific cell types, and for diagnosing cancer.

Claim 11; Fig 78; 314pp; English

The invention describes an isolated PRO (secreted and transmembrane)

Compleptide (I). PRO982, PRO1160, PRO1187 or PRO1229 polypeptide are

completed (I). PRO982, PRO1160, PRO1187 or PRO1229 polypeptide are

completed (I). PRO982, PRO2127, PRO1229, PRO1259 polypeptide are useful

constituent of completed are useful

constituent of conditional process of the pro116 polypeptide

constituent of conditional process.

CC cols. PRO211, PRO327, PRO725, PRO1306 or PRO1419 polypeptide

are useful for stimulating the release of tumour necrosis factor (TNF)
constituent blood. PRO982, PRO351, PRO1725, PRO1306, PRO1419, PRO1414,

PRO1347, PRO3137, PRO526, PRO1605, PRO1603, PRO1141, PRO1060,

CC Inhibiting the proliferation of normal human dermal fibroblast cells.

CC Inhibiting the proliferation of normal human dermal fibroblast cells.

CC Inhibiting the proliferation of normal human dermal fibroblast cells.

CC Inhibiting the prosence of tumour in a mammal mannal. The mammal minder cells of the same cell type, where a higher level of expression of the prosence of tumour, rectal tumour or cumour, breast tumour, prostate tumour, rectal tumour or cumour, breast tumour prostate tumour, rectal tumour or cumour, breast tumour prostate tumour, rectal tumour or cumour, breast unmour, prostate tumour, rectal tumour or cumour, colon tumour breast sample of cells take mannal mannal ma transmembrane PRO polypeptide.

The invention describes an isolated PRO (secreted and transmembrane)

CD polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the pro216 pro1272 or PRO4405 polypeptide are useful for stimulating the pro11feration or differentiation of chondrocyte for stimulating the pro11feration or differentiation of chondrocyte are useful for stimulating the release of tumour necrosis factor (INF)

the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        transmembrane polypeptides) and the PRO polymuclectides encoding them. The PRO polypeptides and polymuclectides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation or differentiation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ΜĬ

chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells or for stimulating the proliferation of normal human dermal fibroblasts. The PRO nucleic acide are useful as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides, or anti-PRO markers and in generating probes. The PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, gports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them. The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour nerrosis factor (TMF)-alpha from human blood, for stimulating the proliferation or differentiation of conditoryte cells for stimulating the proliferation of or gene cormal human dermal fibroblasts. The PRO mucleic acids are useful as hybridisation probes, in chromosome and gene mapping, in generating technology, in generating transgenic animals or knock-out animals which may be used in the development and screening of therapeutically useful reagents, in generating probes. The PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating a medicament for treating and condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO condition which is responsive to the propertical propertical propertical propertical propertical propertical propertical propertical propertical propertical propertical propertical propertical propertical pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antibodies, such as periorte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated PRO polypeptide useful for tissue typing, as molecular weight markers in protein electrophoresis, for treating arthritis, tumor.
                                                                                                                                                                                                                                                       Godowski PJ;

the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, because tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PROS17, PROS29, PRO1772 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and
                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New PRO polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.

```
The invention describes an isolated PRO (secreted and transmembrane) polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in perioryte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO351, PRO355, PRO1155, PRO136 or PRO4419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF) alpha from human blood. PRO982, PRO357, PRO725, PRO1306, PRO1419, PRO144, PRO1419, PRO144, PRO1134, PRO1305, PRO1055, PRO183, PRO840, PRO1080, PRO1055, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, PRO1305, P

stimulating the proliferation of normal human dermal fibroblasts cells.

PRO181, PRO229, PRO186, PRO1194, PRO1272, PRO1488, PRO4302, PRO4408,

PRO5721, PRO5725, PRO7124, or PRO7425 polypeptide are useful for inhibiting the proliferation of normal human dermal fibroblast cells. PRO polypeptides such as PRO6004, PRO4981, PRO7174, PRO5778, PRO4332, etc., are useful for detecting the presence of tumour in a mammal which control sample of involves comparing the level of expression of the above PRO polypeptides in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression of the PRO polypeptides in the test sample as compared to the control sample cells indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. [1] is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful cells useful as molecular weight annound are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, propertice). This is the mammal and processed in the amino acid sequence of a human secreted and transmembrane PRO polypeptide. 8888888888888888888888888888

(II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, sport injuries). This is the amino acid sequence of a human secreted and

WPI; 2003-765528/72.

The invention describes an isolated PRO (secreted and transmembrane) polypeptide (1). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful for stimulating the prol16ration of or gene expression in pericyte cells. PRO357, PRO229, PRO1272 or PRO4465 polypeptide are useful for stimulating the prol1feration or differentiation of chondrocyte cells. PRO357, PRO125, PRO1155, PRO1360 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (PMF)-alpha from human blood. PRO982, PRO357, PRO725, PRO1306, PRO1419, PRO214,

New isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO), for use in recombinantly producing a PRO polypeptide, as a hybridization probe, and in gene therapy.

Claim 11; Fig 78; 309pp; English.

N-PSDB; ADD50468.

Novel isolated PRO polypeptide useful for tissue typing, as molecular weight markers in protein electrophoresis, for treating arthritis, tumor.

Claim 11; Fig 78; 308pp; English.

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.
The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour, breast tumour, comparing the release of tumour necrosis factor (TNF) alpha from human constituting the proliferation of differentiation of condrovyte cells, for stimulating the proliferation of or gene expression in perioyte cells for stimulating the proliferation of condrovyte cells, for stimulating the proliferation of constant human dermal fibroblasts. The PRO nucleic acids are useful as commal human dermal fibroblasts. The PRO nucleic acids are useful as antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful creagents, in gene therapy, in chromosome identification, as chromosome condition which is responsive to the PRO polypeptides, or anti-PRO antibodies, such as perioyre-associated tumours and bone and/or cartiage condition which is responsive to the PRO polypeptides or anti-PRO disorders (e.g. arthritis, sports injuries), involving inducing the rectification of chondrocytes. The PRO polypeptides are useful as molecular markers and human PRO polypeptide of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description

MEDWINE J.A., Sung M., Gipson M., Hartman K., Dyer D.W.;
Transport of intext porphyrin by HpuMB, the hemoglobin-haptoglobin utilization system of Neisseria meningitidis.";
J. Bacteriol. 180:6043-6047(1998).
J. CATALYTIC ACTIVITY: Glutamy1-tRNA(Glu) + NADPH = glutamate-1-semialdehyde + NADP(+) + tRNA(Glu).
Semialdehyde + NADP(+) + tRNA(Glu).
Semialdehyde + NaDP(+) + Glutamy1-tRNA reductase family.
J. SIMILARITY: Belongs to the glutamy1-tRNA reductase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SUBDINIT: PP2A consists of a common heterodimeric core enzyme, composed of a 36 kDa catalytic subunit (subunit C) and a 65 kDa composed of a 36 kDa catalytic subunit (subunit A), that associates constant regulatory subunit (PR65 or subunit A), that associates with a variety of regulatory subunits. Proteins that associate with the core dimer include three families of regulatory subunits B (the R2/B/PR55/B55, R3/B''/PR72/PR130/PR59 and R5/B'/B56 families), the 48 kDa variable regulatory subunit, viral proteins, and cell signaling molecules.
SUBCELULAR LOCATION: Cytoplasmic and nuclear.
SIMILARITY: Belongs to the phosphatase 2A regulatory subunit B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WEDLINE-98162722; PubMed=9501991; Yoshioka S., Kato K., Nakai K., Okayama H., Nojima H.; Yoshioka S., Kato K., Nakai K., Okayama H., Nojima H.; Identification of open reading frames in Schizosaccharomyces pombe

-I. FUNCTION: Part of a cation efflux system that mediates resistance to copper and silver (By similarity).

-I. SUBGNIT: The cus efflux system is composed of cusA, cusB, cusC and cusF (By similarity).

-I. SUBGNITAR LOCATION: Attached to the outer membrane by a lipid
                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Stabhylococcus epidermidis strain (ATCC 12228).";
Mol. Microbiol. 49:1577-1593 (2003).
-!- CATALYTIC ACTIVITY: ATP + L-arginine + tRNA (Arg) = AMP + diphosphate + L-arginyl-trNA (Arg).
-!- SUBUNIT: Monomer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.

Three-dimensional structure of the rotavirus haemagglutinin VP4 by
cryo-electron microscopy and difference map analysis.";
EMBO J. 13:1011-1018(1994).
-!- SUBCELIGIAR LOCATION: Outer capsid.
-!- STMCELIGIAR is one of two trypsin cleavage products of VP4; the other
product is VP5.
-!- SIMILARITY: Belongs to the rotaviruses VP4 protein family.
-!- CAUTION: SEE ALSO VERSION 2 OF THIS PROTEIN.

GEN. VILLO. 74:1212-1221 (1993).

1- SUBCELLULAR LOCATTON: Outer capsid.

1- PTM: VP8 is one of two trypsin cleavage products of VP4; the other product is VP5.

1- SIMILARITY: Belongs to the rotaviruses VP4 protein family.

1- SIMILARITY: DRN00416; Cap VP4.

                                                                                                                                                                                                                                                                                                                                                                      Nucleic Acids Res. 15:4361-4361(1987).

-- SUBCELLULAR LOCATION: Outer capsid.

-- PTM: VPR is one of two trypsin cleavage products of VP4; the other product is VP5.

-- PTM: PRIJARITY: Belongs to the rotaviruses VP4 protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               [Contains: Outer capsid proteins VP5 and VP8].
